# Eliminate render-blocking JavaScript and CSS in above-the-fold content

Mobile

Your page has 9 blocking script resources and 9 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Remove render-blocking JavaScript:

- http://sex-cam.live/wp-content/themes/mondeo-mu/js/jquery.min.1.11.0.js

- http://sex-cam.live/wp-content/themes/mondeo-mu/inc/concat2.php?c=&d=sex-cam.live

- http://sex-cam.live/wp-content/plugins/wp-smushit/app/assets/js/smush-lazy-load.min.js?ver=3.2.4

## Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

63.3KiB of the HTML response was required to render the above-the-fold content. This requires 3 network round-trips. Prioritize the above-the-fold content so that it can be rendered with only the first 2 round-trips' worth of HTML.

- Only about 22% of the final above-the-fold content could be rendered with the HTML delivered within 2 round-trips.

## Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 9% of the final above-the-fold content could be rendered with the full HTML response.
